ADVICE
We give advice and proper consulting - free of charge.

QUOTATION
You receive your quotation: exactly suited for your production and your demands

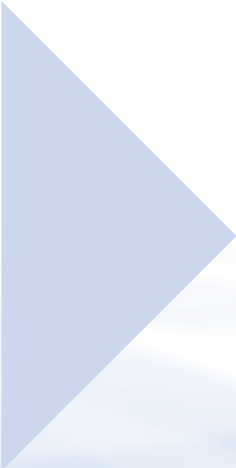

Air filter systems are no catalogue material.

This is why we give you personal advice.
Comprehensively and free of charge.

This is what we do for you:

The adjustment of an air filter unit for a case of application depends on a variety of factors.

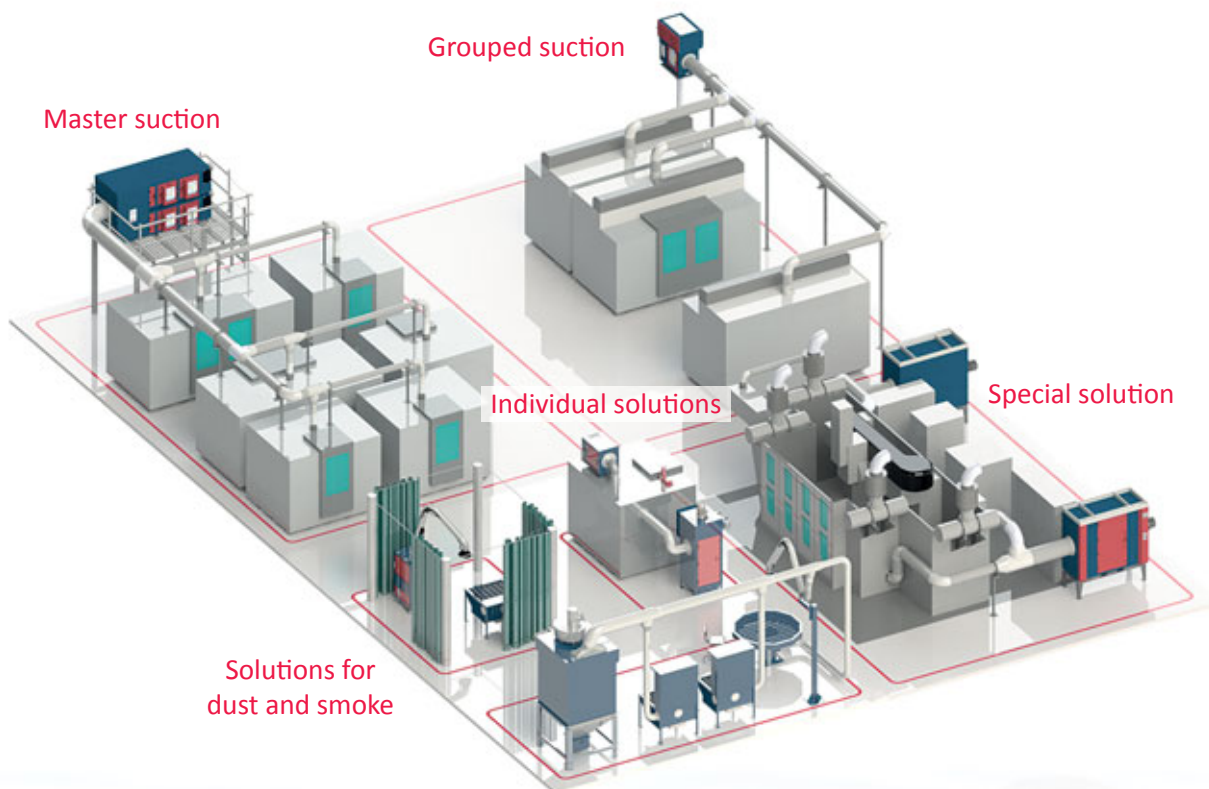

During project planning many factors must be taken into account. We deliver and assemble the air filter unit perfectly adapted to your requirements. Everything from one source, with comprehensive service and warranty. Thus, you can concentrate on things that count: clean quality manufacture.

- 
- Adherence to statutory basics and regulations
 - Collection of the emissions of your production process
 - Consideration of the material the workpiece is made of
 - Consideration of machine data
 - Details on the basis of treatment method
 - Choice of the suitable collection method
 - Calculation of necessary volume flows
 - Taking into account your production sequences
 - Consideration of the cost – benefit relation

We deliver clean air. Guaranteed.

Extraction and air pollution control systems for all industries. Since 1983.

A professional air filtration unit does not only consist of the air filter itself. Every application is different and requires ductwork, handling, and collection equipment or special components. We engineer, deliver and assemble your air pollution control system, which is exactly adapted to your requirements. And we guarantee its proper function.

- You are looking for a solution for your production process?
- You have questions regarding air pollution control?
- You are looking for a one-source-supplier offering planning, assembly, and maintenance?
